

Revive.

AI agents are starting to act — sending, buying, paying.

When one fails, Revive picks it back up — **without doing it twice.**

WHY NOW

Software just started **acting** for us.

2023-24 · TALK

Chatbots & copilots

Wrong answer = annoying.

2026 · ACT

Send. Buy. Pay. Update.

Wrong action = real damage.

NEXT · SCALE

Millions acting daily

Failure = a daily reality.

THE PATTERN

Payments got Stripe. Outages got PagerDuty. **Agents acting in the real world get Revive.**

THE PROBLEM

It's 3am. Your agent just **charged the customer twice.**

It died halfway. Now there's no good move:

RETRY

Sends it twice

the double charge

SKIP

Breaks the job

half-done, untrusted

RECONNECT BLIND

Wrong person acts

as someone else

THE SOLUTION

A safety net under **every** action.

One line of code. Revive owns everything after the failure.

This is what a save looks like.

A failed \$49 charge — caught, verified, and resumed without charging twice.

WHY ONLY US

Anyone can retry. Only we know if it already happened.

Ask the source

Did it send? Did it charge? We check the real system before acting again.

Right human — not any login

We prove the same person came back, not an impostor.

We never hold the keys

Your logins stay in your vault. We coordinate, we don't store.

Knowing what already happened is the hard part. That's the moat — receipts in the data room.

COMPETITION

Everyone owns one piece. **Nobody owns the recovery.**

RUNS THE AGENTS
Temporal · LangGraph

REVIVE
the missing link

LOGS THEM IN
Nango · Auth0

These two sides don't talk to each other. Today teams hand-roll half-fixes. Revive is the real one.

MARKET

Bottom-up. No hand-waves.

TAM

Every team running production agents

500k teams × ~\$2k/yr

\$1B+

SAM

Agents touching email, money, CRM today

50k teams × ~\$2k/yr

\$100M

SOM

Our 3-year capture

2.5k teams × ~\$2k/yr

\$5M ARR

ARPA ~\$2k/yr blended (Team \$99/mo + enterprise). TAM/SAM directional; SOM is our plan.

BUSINESS MODEL

We get paid every time **we save one.**

DEV

\$20/mo

first workflow

TEAM

\$99/mo

the landing plan

ENTERPRISE

Custom

where margin lives

More agents → more saves → bigger plan. Upgrades happen on their own. Software margins.

Land where the **builders already are.**

01

Framework communities

devs hit this exact failure

02

Vault partnerships

a connection dies — we're next

03

Incident inbound

every agent mishap = leads

CAC < \$500

community-led, not sales

LTV ~\$2.4k

Team plan, 2-yr retention

LTV : CAC ~5 : 1

target at scale

12-MO TARGET 40 paying teams + first enterprise = ~\$50k ARR. Unit economics are targets, pre-revenue.

TEAM

Three technical founders. **All ship code.**

Srikanth Samy

CO-FOUNDER & CEO

UC Berkeley

Built the entire system and proved it in production. Leads product + engineering.

Revanth Guda

CO-FOUNDER & CTO

UCLA

[add: what he owns + 1 credential]

Aarush Parekh

CO-FOUNDER · ENG

UC Santa Cruz

[add: what he owns + 1 credential]

TO FINISH drop in headshots + one line of track record per founder; confirm CEO/CTO titles.

It's built. Now we go prove people want it.

ALREADY DONE live product · works in production · developer tools shipped

30+

Interview agent teams

get the pain in their words

5

Design-partner pilots

free plan → a real case study

Signal

Measure demand

installs · waitlist · community

Proof

Publish pilot #1

the first real numbers

Honest: no customers yet. This is the 60-day plan to change that.

THE ASK

\$750k · 18-month runway.

One risk left — distribution. Here's what the money turns it into:

5 → 10+

pilots turned into paying teams

3 + 1

integrations live + first enterprise

~\$450k

ARR — ready to raise the A

THE MONEY BUYS

runway for the team · first sales hire · two more integrations · security groundwork.

REVIVE LABS

Agents are getting hands.
Someone has to own what happens
when the hands slip.
